Topic 01: Give data a readable shape

Data foundations: from S3 objects to analysable tables

TOPIC 01

Give data a readable shape

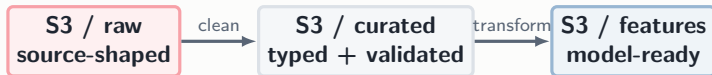

Distinguish storage from a trusted, documented data contract.

What this topic establishes

By the end of this topic, learners can

- explain why an S3 prefix is not a database table; and
- state a simple rule for separating raw, curated and derived data.

A data lake needs a readable convention

Definition – Data contract

An agreed description of fields, types, owners, freshness and allowed values. It lets downstream work fail clearly instead of silently drifting.
