Topic 04: TeXScience diagrams

From data to a deployable churn signal

TOPIC 04

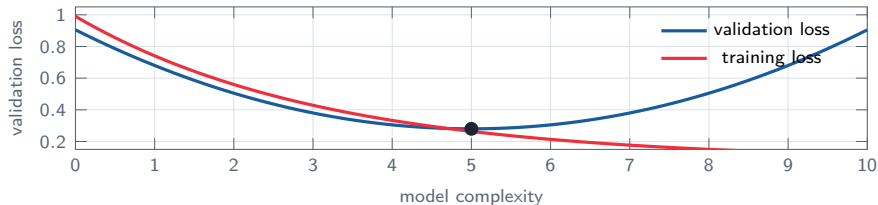

TeXScience diagrams

Use editable scientific plots and diagrams without a remote rendering dependency.

Sample framework / Topic 04

Scientific plot: expose the trade-off, not just the number

Illustrative validation curves

The plot is PGFPlots source: change the functions, units or labels in version control rather than redrawing an image.

Scientific diagram: make the system inspectable

Measurement path

Editable TikZ node-and-flow diagram.

TeXScience support

- `pgfplots` for charts
- `siunitx` for values such as 12.5 ms
- `circuitikz`, `chemfig` and `tikz-3dplot` for domain diagrams
- no shell escape or web renderer required
